PROFILE

Full-stack software engineer and BCIT Computer Systems Technology graduate with hands-on experience owning end-to-end architecture across web and mobile projects. Prior background in management and client-facing roles brings strong communication, accountability, and the ability to ship under real constraints. Proficient in React, Next.js, and React Native. Bilingual in English and Mandarin.

TECHNICAL SKILLS

Front-end & Frameworks: React, Next.js (App Router, API routes, server actions), React Native / Expo, TypeScript, HTML5, CSS

Languages: JavaScript, TypeScript, C, C++, C#, Java, Kotlin

Data & APIs: SQL, MongoDB, Firebase, JWT, AJAX, JSON

Mobile & Tooling: Expo Router, AsyncStorage, React Hook Form

Dev Tools: Docker, Git/GitHub, PostgreSQL

Leadership: Scrum master for teams up to 5 — sprint planning, stand-ups, stakeholder demos, and individual unblocking

PROJECTS

WIT Hydrometric – GLC Tool Facelift | Academic Capstone · Fathom Scientific

Lead Front-End Engineer & Scrum Master · 6-developer team · 3-week fixed sprint

Sole owner of all Bokeh visualisation work on a production hydrometric tool used daily by field hydrologists. Delivered a complete UI overhaul on time for a live client demo with zero regression in calculation logic.

- Owned and shipped full Bokeh plot redesign — updated colour palettes, toolbar layout, and responsive sizing to match a new design system, eliminating a known usability complaint from hydrologists in under 2 days.
- Engineered a table–chart multi-select bridge in vanilla JavaScript that synchronised HTML table checkboxes with Bokeh ColumnDataSource selections across two live figures — a feature the client had requested for over a year.
- Drove PR review discipline across 6 contributors: caught and resolved 4 layout regressions and 2 plot-interaction bugs before client demo, keeping the shared integration branch green throughout the sprint.
- Owned local integration testing in Docker (Django, Bokeh, PostgreSQL): led merge validation, static asset builds, and pre-demo smoke tests — demo shipped with zero blocking defects.

Stack: Python, Django, Bokeh, JavaScript, HTML/CSS, PostgreSQL, Docker, Git/GitHub

ChildGuard ID | Academic Project · KOM Community Policing Center

Mobile Architect & Tech Lead · 5-developer team

Designed and owned the entire mobile architecture, data layer, and user flows for a child safety app built in direct partnership with a local community policing organisation.

- Architected the full React Native component tree and screen hierarchy using Expo Router, reducing cross-team merge conflicts by establishing clear ownership boundaries across 5 contributors.
- Designed a local-first offline data layer with AsyncStorage — supporting full CRUD, load-on-launch hydration, and refresh patterns — enabling the app to function in low/no-connectivity environments critical for field officers.
- Built and owned all multi-step form flows using React Hook Form + Zod, handling nested fields, conditional steps, and real-time error surfacing; form completion rate in user testing reached ~95% with no data loss on interruption.
- Delivered PDF export of completed child profiles for offline sharing and printing — a key deliverable specifically requested by partner officers for field use.

Stack: React Native, Expo, TypeScript, React Hook Form, Zod, AsyncStorage, Expo Router

ShelterLink | Academic Project

Full-Stack Lead & Architect · 5-developer team

Led full-stack architecture for a real-time resource-matching platform connecting shelters, volunteers, and the public. Owned back-end integration, authentication, mapping, and the overall Next.js structure.

- Architected the Next.js App Router structure, enforcing a clean server/client split that cut redundant re-renders and simplified onboarding for 4 teammates.
- Built a reusable React component library (shelter cards, inventory forms, donation modals, role-aware nav) with Tailwind CSS — components were adopted by all 5 developers with no rework, accelerating delivery by an estimated sprint.
- Designed the MongoDB Atlas schema across shelters, users, inventory, and donations; implemented full CRUD plus business logic (inventory thresholds, donation matching) — data layer handled 100% of demo scenarios without query errors.
- Integrated Mapbox GL for interactive shelter discovery and turn-by-turn directions; implemented JWT-based auth with role separation; added a Cohere-powered AI feature surfacing actionable volunteer actions.

Stack: Next.js, React, TypeScript, Tailwind CSS, MongoDB Atlas, Mapbox GL, JWT, Cohere

WORK EXPERIENCE

General Manager · Great Glasses

Sep 2019 – Feb 2022 | Jun 2024 – Present

- Built a retail analytics dashboard from scratch using SQLite, Node.js/Express, and a custom browser UI — surfacing KPIs, trend charts, heatmaps, and date-range filters that replaced manual spreadsheet reviews and saved ~3 hours/week.
- Lead and develop a team of 4–6: own hiring, onboarding, training, weekly performance reviews, and day-to-day coaching; report growth opportunities and sales metrics directly to ownership.
- Own the full customer lifecycle — CRM practices, repeat-business nurturing, and escalation resolution — contributing to consistent retention improvement.

Customer Service Representative · Bank of Montreal

Mar 2023 – May 2024

- Managed administrative workflows, database records, and client documentation while delivering high-volume customer service; processed business correspondence, legal documents, reports, and invoices with high accuracy in a regulated environment.

Product Advisor · Westminster Toyota

Feb 2022 – Sep 2022

- Consistently generated \$250,000+ in monthly sales revenue while managing a substantial client database and guiding customers through new and pre-owned vehicle purchases.

EDUCATION

British Columbia Institute of Technology · Computer Systems Technology (Diploma)

2024 – 2026

University of Toronto

2015 – 2019

CS50: Introduction to Computer Science · Harvard University (Online)

Completed
